

Our highly skilled and professional team is prepared to help you safely manage your office by cleaning for health, using the best techniques science has to offer.

Our cleaning program ensures your office has the best disinfection and cleaning services available by trained cleaning professionals, including:

- COVID-19 Response
- Deep Clean & Disinfecting
- EPA Registered Disinfectants
- Electrostatic Spraying
- Touchpoint Cleaning, Day Porter/Matrons
- Site Assessment and Risk Mitigation
- Crisis Collaborative Consulting Services
- Science Based Process and Procedures

Electrostatic Spraying

The electrostatic sprayer is our primary delivery method for immediate response to a confirmed COVID-19 case. This process is an industrial dispersion sprayer that electrically charges fine micro droplets of our disinfectant solution. The charged droplets are drawn to nearby grounded objects & surfaces such as desks, chairs, and computers uniformly, allowing much more efficient dispersion of the disinfectant.

Deep Cleaning

Additional staff can provide enhanced disinfecting services for tenant space to include:

The application of disinfectant to all high touch points in lobbies and entrances, elevators, table tops, light switches reception areas, conference rooms, kitchenettes, cabinet handles, appliance handles, vending machines, table tops and chairs, rest rooms, work stations and offices (to include exposed desk surfaces, key boards, phones, chairs) and common area hallways. The deep clean is offered as a proactive service as well as a response to a confirmed case.

Flexible Service

Janitronics Building Services offers one-time, daily, weekly and monthly service plans.
